TECHNICAL DOCUMENTATION.....111

CISCO'S COPYRIGHTED WORKS

Cisco alleges that defendant Arista Networks, Inc. (“Arista”) copied Cisco’s copyrighted command-line user interface (“user interface”) and associated technical documents. As set forth in Cisco’s analytic dissection briefing, Cisco’s user interface includes a set of textual expressions by which a human operator uses text-based expressions to interact with, manage, and configure networking equipment such as routers and switches, as well as the textual responses the user receives in those interactions. In fashioning its copyright claims, Cisco has already filtered out unprotectable elements of its user interface and technical documentation that Arista has copied such as single word command expressions. Cisco asserts that Arista unlawfully copied protectable elements of its user interface and protectable portions of its technical documentation. Specifically, Cisco contends that the following five categories of protectable elements from its user interface, all of which together make up the look and feel of Cisco’s user interface, should be included in a comparison between Cisco’s copyrighted user interface and Arista’s infringing user interface: (1) multiword command expressions, (2) command modes and prompts, (3) command hierarchies, (4) command responses/outputs, and (5) help descriptions. Cisco also contends that specific portions of its technical documents/user manuals that explain the operation of Cisco’s user interface also are protectable. For each category, Cisco has identified the protectable elements below.

MULTIWORD COMMAND EXPRESSIONS

Cisco contends that the following multiword command expressions are protectable elements of Cisco's user interface as individual command expressions and as collections of multiword command expressions associated with specific operating systems, identified below as IOS, IOS-XR, IOS-XE, and NX-OS. As reflected in the tables below, many multiword commands appear in more than one Cisco operating system. Further, some commands are associated with different networking protocols, *e.g.*, OSPFv2 or OSPFv3, which are policies comprised of rules, procedures, and formats that define how devices communicate with each other. For purposes of this submission, where a multiword command is associated with more than one networking protocol, Cisco has listed the command expression once per operating system so as to avoid any confusion. For example, the "area nssa" multiword command expression can be used for OSPFv2 or OSPFv3, but Cisco lists that command once as "area nssa."

As set forth in Cisco's analytic dissection brief, Cisco's multiword command expressions are typed into Cisco's user interface by system operators and are then displayed on a computer screen that is connected to a networking device such as a switch or router. Cisco engineers could have chosen a graphical user interface (as other vendors have done), Linux interfaces (like Arista's alternative approach, which is used by 20% of its customers), or selected any number of different word combinations for each of the multiword command expressions listed below (as other vendors have done). Further, the development of Cisco's multiword command expressions was the result of a creative process within the company and the professional judgment of Cisco employees. As the Court's summary judgment order states: "In *CDN Inc. v. Kapes*, 197 F.3d 1256, 1260 (9th Cir. 1999), a case involving collectible coins, the plaintiff's employees relied upon coin publications, real-world transactions, supply and demand projections, analyze the effect of the economy and foreign policies to determine the wholesale prices of coins. The Ninth Circuit found that prices in

CDN's price guides were copyrightable because CDN used its judgment to create the prices." Dkt.

482 at 12. The Court's order then quotes the following passage from *CDN*:

[W]hat is important is the fact that [parties] arrive at the prices they list through a process that involves using their judgment to distill and extrapolate from factual data. It is simply not a process through which they discover a preexisting historical fact, but rather a process by which they create a price which, in their best judgment, represents the value of an item as closely as possible... This *process* imbues the prices listed with sufficient creativity and originality to make them copyrightable.

Id. at 13 (emphasis added by the Court). The Court thereafter concluded:

The fact that CDN used a process to determine, in its judgment, the value of coins was enough for the Ninth Circuit to find CDN's prices were copyrightable. The Ninth Circuit did not engage in an analysis of each and every price CDN calculated to determine if it possessed a minimal degree of creativity and originality. . . . Arista misreads *CDN* as it applies to this case. If Cisco copied historical commands, without more, there may be merit to Arista's argument. Cisco has provided evidence that it used its own judgment and expertise in arriving at multi word commands. Second, Cisco's attempt to rely on a process is not an end-around the statutory presumption applied to timely copyright registrations because Cisco has pointed to several pieces of evidence indicating that there was a creative process in place.

Id. (internal quotation marks, citations, and brackets omitted). As in *CDN*, Cisco's multiword command expressions resulted from a creative process.

MODES & PROMPTS

Cisco contends that the following modes and prompts are protectable elements of Cisco's user interface as collections of modes and prompts associated with specific operating systems, identified below as IOS, IOS-XR, IOS-XE, and NX-OS. As set forth in Cisco's analytic dissection brief, Cisco's user interface provides a selection of modes that permit greater or fewer command expressions based on operator status. For example, a user who has entered "Privilege EXEC" mode will have access to different commands than a user who is in "User EXEC" mode. Different modes are indicated by different textual titles and different textual prompts that appear on the screen (*e.g.*, "(config-if)#" or "(config)#"). These prompts are used to indicate to a user which mode he or she is in, and thus which commands the user has access to. Cisco engineers could have chosen different combinations of modes and prompts. As Cisco stated in its opposition to Arista's motion for partial summary judgment (Dkt. 372 at 18-21), Cisco claims protection not in individual modes and prompts in isolation, but rather the particular arrangement of modes and prompts in Cisco's user interface, which are components of Cisco's distinctive user interface.

IOS

Mode	Prompt
User EXEC	>
Privileged EXEC	#
Global Configuration	(config)#
Interface Configuration	(config-if)#

IOS-XR

Mode	Prompt
User EXEC	>
Privileged EXEC	#
Global Configuration	(config)#
Interface Configuration	(config-if)#

IOS-XE

Mode	Prompt
User EXEC	>
Privileged EXEC	#
Global Configuration	(config)#
Interface Configuration	(config-if)#

NX-OS

Mode	Prompt
User EXEC	>
EXEC	#
Privileged EXEC	#
Global Configuration	(config)#
Interface Configuration	(config-if)#

HIERARCHIES

Cisco contends that the following multiword command hierarchies are protectable elements of Cisco's user interface as individual command hierarchies with a specific structure and organization as well as collections of hierarchies associated with specific operating systems, identified below as IOS, IOS-XR, IOS-XE, and NX-OS. As reflected in the tables below, some command hierarchies appear in more than one Cisco operating system. As set forth in Cisco's analytic dissection brief, each multiword command expression reflects Cisco's creation of specific multi-level textual hierarchies from which the multiword commands are constructed. Cisco engineers made their own subjective decisions on arranging their multiword commands in a distinct hierarchical fashion. Cisco has illustrated the command hierarchies in the following tables in order to illustrate to the Court the relationship between the commands and show how they are sequenced, structured, and organized into hierarchies. Further, the Court held in its summary judgment order that: "The Ninth Circuit has held that a computer program's structure, sequence, and organization are copyrightable. *Johnson Controls, Inc. v. Phoenix Control Sys, Inc.*, 886 F.2d 1173, 1175-76 (9th Cir. 1989). Here, Cisco is not attempting to claim a copyright on the generic idea of a hierarchy but rather the unique sequence in which it organizes its multi-word commands. *See Atari Games Corp. v. Nintendo of Am. Inc.*, 975 F.2d 832, 840 (Fed. Cir. 1992) (applying Ninth Circuit law)." Dkt. 482 at 14-15.

COMMAND RESPONSES

Cisco contends that the following command responses (also referred to as command outputs) are protectable elements of Cisco's user interface both individually and as a collection of outputs associated with specific operating systems, identified below as IOS and NX-OS. For the avoidance of doubt, where a red box is used to highlight text below, the text within the red box is what Cisco claims to be protectable. As set forth in Cisco's analytic dissection brief, once a multi-word command expression is input by an operator, the switch or router analyzes the command and responds by displaying textual screen outputs on the computer screen. Each of the copied text portions from these screen outputs could have been written and sequenced in a different way.

IOS

Switch(config)#help

Help may be requested at any point in a command by entering a question mark '?'. If nothing matches, the help list will be empty and you must backup until entering a '?' shows the available options.

Two styles of help are provided:

1. Full help is available when you are ready to enter a command argument (e.g. 'show ?') and describes each possible argument
2. Partial help is provided when an abbreviated argument is entered and you want to know what arguments match the input (e.g. 'show pr?'.)

```

Switch#show snmp
Chassis: CAT1552S66E
0 SNMP packets input
    0 Bad SNMP version errors
    0 Unknown community name
    0 Illegal operation for community name supplied
    0 Encoding errors
    0 Number of requested variables
    0 Number of altered variables
    0 Get-request PDUs
    0 Get-next PDUs
    0 Set-request PDUs
    0 Input queue packet drops (Maximum queue size 1000)
0 SNMP packets output
    0 Too big errors (Maximum packet size 1500)
    0 No such name errors
    0 Bad values errors
    0 General errors
    0 Response PDUs
    0 Trap PDUs
SNMP global trap: disabled
SNMP agent enabled

```

```

Switch#show ip route

TCN solicit query       : Disabled
TCN flood query count    : 2
Last Member Query Interval : 1000
```

```
Vlan 1:
```

```
-----
IGMP snooping           : Enabled
CAPWAP enabled          : Disabled
IGMPv2 immediate leave   : Disabled
Explicit host tracking    : Enabled
Multicast router learning mode : pim-dvmrp
CGMP interoperability mode : IGMP_ONLY
Last Member Query Interval : 1000
```

```

Switch#show interfaces FastEthernet 1
FastEthernet1 is down, line protocol is down
  Hardware is Fast Ethernet for out of band management, address is c464.1342.efbf (bia
c464.1342.efbf)
  Internet address is 10.1.1.35/24
  MTU 1500 bytes, BW 100000 Kbit, DLY 100 usec,
    reliability 255/255, txload 1/255, rxload 1/255
  Encapsulation ARPA, loopback not set
  Keepalive set (10 sec)
  Unknown duplex, Unknown Speed, 100BaseTX/FX
  ARP type: ARPA, ARP Timeout 04:00:00
  Last input never, output never, output hang never
  Last clearing of "show interface" counters never
  Input queue: 0/75/0/0 (size/max/drops/flushes); Total output drops: 0
  Queueing strategy: fifo
  Output queue: 0/40 (size/max)
  5 minute input rate 0 bits/sec, 0 packets/sec
  5 minute output rate 0 bits/sec, 0 packets/sec
    0 packets input, 0 bytes
    Received 0 broadcasts (0 IP multicasts)
    0 runs, 0 giants, 0 throttles
    0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored
    0 watchdog
    0 input packets with dribble condition detected
    0 packets output, 0 bytes, 0 underruns
    0 output errors, 0 collisions, 2 interface resets
    0 babbles, 0 late collision, 0 deferred
    0 lost carrier, 0 no carrier
    0 output buffer failures, 0 output buffers swapped out

```

Command Examples This example shows the output from the `show port-security` command when you do not enter any options:

```

Router# show port-security
Secure Port      MaxSecureAddr  CurrentAddr  SecurityViolation  Security
Action
              (Count)          (Count)          (Count)
-----
Fa5/1             11             11             0             Shutdown
Fa5/5             15             5              0             Restrict
Fa5/11            5              4              0             Protect

 0 packets input, 0 bytes, 0 no buffer
Received 0 broadcasts, 0 runts, 0 giants, 0 throttles
 0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored
 0 input packets with dribble condition detected
11 packets output, 1648 bytes, 0 underruns
 0 output errors, 0 collisions, 1 interface resets
 0 babbles, 0 late collision, 0 deferred
 0 lost carrier, 0 no carrier
 0 output buffer failures, 0 output buffers swapped out

```

Configuration Fundamentals Configuration Guide, Cisco IOS Release 15M&T (2013), at 44

Use the `show interface interface-type interface-number` command to display the information and statistics for Ethernet 0 on R4.

```

R4> show interface ethernet 0
Ethernet0 is up, line protocol is up
Hardware is Lance, address is 00e0.1eb8.eb0e (bia 00e0.1eb8.eb0e)
The MAC address for Ethernet 0 on R4 is 00e0.1eb8.eb0e. The format of the client identifier for this interface
is nullcisco-00e0.1eb8.eb0e-et0.

```

Configuration Fundamentals Configuration Guide, Cisco IOS Release 15M&T (2013), at 81

The following is sample output from the `show ip igmp snooping` command:

```

Router# show ip igmp snooping
Global IGMP Snooping configuration:
-----
IGMP snooping                : Enabled
IGMPv3 snooping (minimal)    : Enabled
Report suppression           : Enabled
TCN solicit query            : Disabled
TCN flood query count        : 2
Last Member Query Interval    : 1000

```

Cisco IOS IP Multicast Command Reference (2013), at 626

Examples

This example shows how to display transceiver information:

```
Router# show interfaces transceiver
If device is externally calibrated, only calibrated values are printed.
++ : high alarm, + : high warning, - : low warning, -- : low alarm.
NA or N/A: not applicable, Tx: transmit, Rx: receive.
mA: milliamperes, dBm: decibels (milliwatts).
```

Port	Temperature (Celsius)	Voltage (Volts)	Current (mA)	Optical Tx Power (dBm)	Optical Rx Power (dBm)
Gi1/1	40.6	5.09	0.4	-25.2	N/A
Gi2/1	35.5	5.05	0.1	-29.2	N/A
Gi2/2	49.5	3.30	0.0	7.1	-18.7

Cisco IOS Interfaces and Hardware Component Command Reference (2013), at 1879

The following is sample output from the `show ip ospf` command when entered without a specific OSPF process ID:

```
Router# show ip ospf
Routing Process "ospf 201" with ID 10.0.0.1 and Domain ID 10.20.0.1
Supports only single TOS(TOS0) routes
Supports opaque LSA
SPF schedule delay 5 secs, Hold time between two SPFs 10 secs
Minimum LSA interval 5 secs, Minimum LSA arrival 1 secs
LSA group pacing timer 100 secs
Interface flood pacing timer 55 msec
Retransmission pacing timer 100 msec
Number of external LSA 0, Checksum Sum 0x0
Number of opaque AS LSA 0, Checksum Sum 0x0
Number of DCbitless external and opaque AS LSA 0
Number of DoNotAge external and opaque AS LSA 0
Number of areas in this router is 2. 2 normal 0 stub 0 nssa
External flood list length 0
Area BACKBONE(0)
Number of interfaces in this area is 2
Area has message digest authentication
SPF algorithm executed 4 times
Area ranges are
Number of LSA 4, Checksum Sum 0x29BEE
Number of opaque link LSA 0, Checksum Sum 0x0
Number of DCbitless LSA 3
Number of indication LSA 0
Number of DoNotAge LSA 0
Flood list length 0
Area 172.16.26.0
Number of interfaces in this area is 0
Area has no authentication
SPF algorithm executed 1 times
Area ranges are
172.16.0.0/16 Passive Advertise
Number of LSA 1, Checksum Sum 0x44FD
Number of opaque link LSA 0, Checksum Sum 0x0
Number of DCbitless LSA 1
Number of indication LSA 1
Number of DoNotAge LSA 0
Flood list length 0
```

Examples

The following is sample output from the `show snmp` command:

```
Router# show snmp
Chassis: 12161083
0 SNMP packets input
0 Bad SNMP version errors
0 Unknown community name
0 Illegal operation for community name supplied
0 Encoding errors
0 Number of requested variables
0 Number of altered variables
0 Get-request PDUs
0 Get-next PDUs
0 Set-request PDUs
0 Input queue packet drops (Maximum queue size 1000)
0 SNMP packets output
0 Too big errors (Maximum packet size 1500)
0 No such name errors
0 Bad values errors
0 General errors
0 Response PDUs
0 Trap PDUs
SNMP logging: enabled
SNMP trap Queue: 0 dropped due to resource failure.
```

Cisco IOS SNMP Support Command Reference (2013), at 83

```

Router# show interfaces atm 0/0/0
ATM0/0/0 is up, line protocol is up
Hardware is cyBus ATM
Internet address is 10.1.1.1/24
MTU 4470 bytes, sub MTU 4470, BW 156250 Kbit, DLY 80 usec, rely 255/255, load 1/255
Encapsulation ATM, loopback not set, keepalive set (10 sec)
Encapsulation(s): AAL5, PVC mode
256 TX buffers, 256 RX buffers,
2048 maximum active VCs, 1024 VCs per VP, 1 current VCCs
VC idle disconnect time: 300 seconds
Last input never, output 00:00:05, output hang never
Last clearing of "show interface" counters never
Queueing strategy: fifo
Output queue 0/40, 0 drops; input queue 0/75, 0 drops
5 minute input rate 0 bits/sec, 1 packets/sec
5 minute output rate 0 bits/sec, 1 packets/sec
  5 packets input, 560 bytes, 0 no buffer
    Received 0 broadcasts, 0 runs, 0 giants
    0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored, 0 abort
  5 packets output, 560 bytes, 0 underruns
    0 output errors, 0 collisions, 0 interface resets
    0 output buffer failures, 0 output buffers swapped out

```

Cisco IOS Asynchronous Transfer Mode Command Reference (2011), at ATM-377

```
Router# show ip route
```

```

Codes: C - connected, S - static, I - IGRP, R - RIP, M - mobile, B - BGP
       D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
       N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
       E1 - OSPF external type 1, E2 - OSPF external type 2, E - EGP
       i - IS-IS, su - IS-IS summary, L1 - IS-IS level-1, L2 - IS-IS level-2
       ia - IS-IS inter area, * - candidate default, U - per-user static route
       o - ODR, P - periodic downloaded static route

```

Gateway of last resort is not set

Cisco IOS IP Routing Protocols Command Reference, Release 12.4 (2005), at IP2R-553

Usage Guidelines

This command provides counter information for SNMP operations. It also displays the chassis ID string defined with the `snmp-server chassis-id` global configuration command.

Command Examples

The following is sample output from the `show snmp` command:

```

Router# show snmp
Chassis: 12161083
0 SNMP packets input
  0 Bad SNMP version errors
  0 Unknown community name
  0 Illegal operation for community name supplied
  0 Encoding errors
  0 Number of requested variables
  0 Number of altered variables
  0 Get-request PDUs
  0 Get-next PDUs
  0 Set-request PDUs
0 Input queue packet drops (Maximum queue size 1000)
0 SNMP packets output
  0 Too big errors (Maximum packet size 1500)
  0 No such name errors
  0 Bad values errors
  0 General errors
  0 Response PDUs
  0 Trap PDUs
SNMP logging: enabled

```

Cisco IOS SNMP Support Command Reference, IOS 15.2 (2011), at 95-96

NX-OS

Examples

This example shows how to display VTP interface switchport information on the device:

```
switch# show interface switchport
Name: Ethernet8/11
Switchport: Enabled
Switchport Monitor: Not enabled
Operational Mode: trunk
Access Mode VLAN: 1 (default)
Trunking Native Mode VLAN: 1 (default)
Trunking VLANs Enabled: 1,10,20-30
Pruning VLANs Enabled: 2-1001
Administrative private-vlan primary host-association: none
Administrative private-vlan secondary host-association: none
Administrative private-vlan primary mapping: none
Administrative private-vlan secondary mapping: none
Administrative private-vlan trunk native VLAN: none
Administrative private-vlan trunk encapsulation: dot1q
Administrative private-vlan trunk normal VLANs: none
Administrative private-vlan trunk private VLANs: none
Operational private-vlan: none
switch#
```

Cisco Nexus 7000 Series NX-OS Layer 2 Switching Command Reference (Feb. 2013), at 44

Examples

This example shows how to display information about the specified VLAN. This command displays statistical information gathered on the VLAN at 1-minute intervals:

```
switch# show interface vlan 5
Vlan5 is administratively down, line protocol is down
Hardware is EtherSVI, address is 0000.0000.0000
MTU 1500 bytes, BW 1000000 Kbit, DLY 10 usec,
    reliability 255/255, txload 1/255, rxload 1/255
Encapsulation ARPA, loopback not set
Keepalive not supported
ARP type: ARPA
Last clearing of "show interface" counters 01:21:55
1 minute input rate 0 bytes/sec, 0 packets/sec
1 minute output rate 0 bytes/sec, 0 packets/sec
L3 Switched:
    input: 0 pkts, 0 bytes - output: 0 pkts, 0 bytes
L3 in Switched:
    ucast: 0 pkts, 0 bytes - mcast: 0 pkts, 0 bytes
L3 out Switched:
    ucast: 0 pkts, 0 bytes - mcast: 0 pkts, 0 bytes
```

Cisco Nexus 7000 Series NX-OS Layer 2 Switching Command Reference (Feb. 2013), at 49

Examples

This example shows how to display STP when you are running Rapid PVST+:

```
switch# show spanning-tree

VLAN0001
Spanning tree enabled protocol rstp
  Root ID    Priority    32769
    Address   000d.eca3.9f01
      Cost    4
      Port    4105 (port-channel10)
    Hello Time 2 sec Max Age 20 sec Forward Delay 15 sec

```

Cisco Nexus 7000 Series NX-OS Multicast Routing Command Reference (August 2013), at 50.

Examples

This example shows how to use the `show port-security` command to view the status of the port security feature on a device:

```
switch# show port-security
```

```
Total Secured Mac Addresses in System (excluding one mac per port) : 0
Max Addresses limit in System (excluding one mac per port) : 8192
```

Secure Port	MaxSecureAddr (Count)	CurrentAddr (Count)	SecurityViolation (Count)	Security Action
Ethernet1/4	5	1	0	Shutdown

```
switch#
```

Cisco Nexus 7000 Series NX-OS Security Command Reference (August 2013), at SEC-661.

Examples

This example shows how to use the `show port-security address` command to view information about all MAC addresses secured by port security:

```
switch# show port-security address
```

```
Total Secured Mac Addresses in System (excluding one mac per port) : 0
Max Addresses limit in System (excluding one mac per port) : 8192
```

Secure Mac Address Table				
Vlan	Mac Address	Type	Ports	Remaining Age (mins)
1	0054.AAB3.770F	STATIC	port-channel1	0
1	00EE.378A.ABCE	STATIC	Ethernet1/4	0

```
switch#
```

This example shows how to use the `show port-security address` command to view the MAC addresses secured by the port security feature on the Ethernet 1/4 interface:

```
switch# show port-security address interface ethernet 1/4
```

Secure Mac Address Table				
Vlan	Mac Address	Type	Ports	Remaining Age (mins)
1	00EE.378A.ABCE	STATIC	Ethernet1/4	0

```
switch#
```

Cisco Nexus 7000 Series NX-OS Security Command Reference (August 2013), at SEC-664.

Examples

This example shows how to display the EEE status on an interface:

```
switch# show interface ethernet2/6
Ethernet2/6 is down (Link not connected)
admin state is up, Dedicated Interface
Hardware: 10000 Ethernet, address: 0022.5579.de41 (bia 001b.54c1.af5d)
MTU 1500 bytes, BW 10000000 Kbit, DLY 10 usec
reliability 255/255, txload 1/255, rxload 1/255
Encapsulation ARPA, medium is broadcast
auto-duplex, auto-speed, media type is 10G
Beacon is turned off
Auto-Negotiation is turned off
Input flow-control is off, output flow-control is off
Auto-mdix is turned off
Rate mode is shared
Switchport monitor is off
EtherType is 0x8100
EEE (efficient-ethernet) : n/a
Last link flapped never
Last clearing of "show interface" counters never
0 interface resets
30 seconds input rate 0 bits/sec, 0 packets/sec
30 seconds output rate 0 bits/sec, 0 packets/sec
Load-Interval #2: 5 minute (300 seconds)
```

Cisco Nexus 7000 Series NX-OS System Management Command Reference (August 2013), at 514.

Examples

This example shows how to display the PTP clock information:

```
switch# show ptp clock
PTP Device Type: Boundary clock
Clock Identity: 0:18:ba:ff:ff:d8: e:17
Clock Domain: 0
Number of PTP ports: 2
Priority1: 255
Priority2: 255
Clock Quality:
Class: 248
Accuracy: 254
Offset (log variance): 65535
Offset From Master: 0
Mean Path Delay: 0
Steps removed: 1
Local clock time: Sun Jan 15 20:57:29 2011
```

Cisco Nexus 7000 Series NX-OS System Management Command Reference (August 2013), at 601.

Examples

This example shows how to display information about the parent and grand master of the PTP clock:

```
switch# show ptp parent
Parent Clock:
Parent Clock Identity: 0:18:ba:ff:ff:d8: e:16
Parent Port Number: 1546
Observed Parent Offset (log variance): N/A
Observed Parent Clock Phase Change Rate: N/A

Grandmaster Clock:
Grandmaster Clock Identity: 0:18:ba:ff:ff:d8: e:16
Grandmaster Clock Quality:
Class: 248
Accuracy: 254
Offset (log variance): 65535
Priority1: 255
Priority2: 255
```

Cisco Nexus 7000 Series NX-OS System Management Command Reference (August 2013), at 607.

Examples

This example shows how to display the PTP clock properties:

```
switch# show ptp time-property
PTP CLOCK TIME PROPERTY:
Current UTC Offset valid: 0
Current UTC Offset: 33
Leap59: 0
Leap61: 0
Time Traceable: 0
Frequency Traceable: 0
PTP Timescale: 0
Time Source: 0xA0(internal oscillator)
```

Cisco Nexus 7000 Series NX-OS System Management Command Reference (August 2013), at 611.

Examples

This example shows how to display the SNMP information:

```
switch(config)# show snmp
sys contact:
sys location: anyplace, Anywhere

0 SNMP packets input
0 Bad SNMP versions
0 Unknown community name
0 Illegal operation for community name supplied
0 Encoding errors
0 Number of requested variables
0 Number of altered variables
0 Get-request PDUs
0 Get-next PDUs
0 Set-request PDUs

0 SNMP packets output
0 Too big errors
0 No such name errors
0 Bad values errors
0 General errors
```

Cisco Nexus 7000 Series NX-OS System Management Command Reference (August 2013), at 634.

Examples

This example shows how to display the SNMP engine ID:

```
switch(config)# show snmp engineID  
Local SNMP engineID: [Hex] 80000009030005300A0B0C  
[Dec] 128:000:000:009:003:000:005:048:010:011:012
```

Cisco Nexus 7000 Series NX-OS System Management Command Reference, Release 5.x (April 2010), at 533.

HELP DESCRIPTIONS

Cisco contends that the following multiword help descriptions (also known as help strings, help text, or helpdesc) are protectable elements of Cisco's user interface both individually and as collections of help descriptions associated with specific operating systems, identified below as IOS and IOS-XR. As reflected in the tables below, some help descriptions appear in more than one Cisco operating system. Further, these multiword help descriptions are the result of a creative process within the company and the professional judgment of Cisco employees. As the Court's summary judgment order states: "In *CDN Inc. v. Kapes*, 197 F.3d 1256, 1260 (9th Cir. 1999), a case involving collectible coins, the plaintiff's employees relied upon coin publications, real-world transactions, supply and demand projections, analyze the effect of the economy and foreign policies to determine the wholesale prices of coins. The Ninth Circuit found that prices in CDN's price guides were copyrightable because CDN used its judgment to create the prices." Dkt. 482 at 12. The Court's order then quotes the following passage from *CDN*:

[W]hat is important is the fact that [parties] arrive at the prices they list through a process that involves using their judgment to distill and extrapolate from factual data. It is simply not a process through which they discover a preexisting historical fact, but rather a process by which they create a price which, in their best judgment, represents the value of an item as closely as possible...This *process* imbues the prices listed with sufficient creativity and originality to make them copyrightable.

Id. at 13 (emphasis added by the Court). The Court thereafter concluded: "The fact that CDN used a process to determine, in its judgment, the value of coins was enough for the Ninth Circuit to find CDN's prices were copyrightable. The Ninth Circuit did not engage in an analysis of each and every price CDN calculated to determine if it possessed a minimal degree of creativity and originality. Similarly, Cisco has adduced evidence of a process it undertook to create its CLI commands, and such a process is enough to create a genuine issue of material fact." *Id.*

As in *CDN*, Cisco's help descriptions resulted from a creative process. As set forth in Cisco's analytic dissection brief, a device operator may ask for help in using a multiword command expressions by typing a command expression followed by a question mark ("??") into Cisco's user interface, in which case a textual help description will be displayed on the screen. In the early 1990s, a Cisco contractor named Terry Slattery created the help descriptions in version 9.21 of Cisco's IOS through a creative process whereby he consulted Cisco documents, Cisco devices, and Cisco source code and used his judgment and creativity to create the help descriptions. Thereafter, the Cisco help descriptions were authored according to a creative process whereby a Cisco engineer would create a new command expression and then create a description of that command expression using the engineer's own professional judgment and subjective preferences. When the new command expression was incorporated into Cisco's source code, the help description was input at the same time. Each of these help descriptions could have been written with different combinations of words, sequence, and syntax—their creation is left to an individual Cisco engineer's own subjective, professional judgment.
